

CALL FOR APPLICATIONS

PHD MINICOURSE ON SUBJECTIVE EXPECTATIONS IN ECONOMICS

Bocconi University, 14 June 2023

HOW TO APPLY

- Please send your CV and a short letter of motivation to expectationssummerschool2023@unibocconi.it, using the following email title “[PhD Minicourse on Subjective Expectations in Economics]”.
- Please ask your PhD supervisor to send a short letter of recommendation to expectationssummerschool2023@unibocconi.it, using the following email title “[LOR for Your FirstName LastName]”.

DEADLINE TO APPLY

- **Friday, 3 March 2023**
- Successful applicants will be notified by **24 March 2023**.

DESCRIPTION

The minicourse aims at providing Ph.D. students with the tools to carry out research in the rapidly growing area of subjective expectations, with an emphasis on closely integrating economic theory, econometric methods, and survey-elicited subjective expectations in empirical microeconomic and macroeconomic work. The course will cover issues in survey elicitation of subjective expectations and their use in economic research across economic sub-fields. We will use a variety of empirical applications to illustrate how these tools and methods are combined to address important applied questions.

The course consists of 1 day of lectures, following the Workshop on Subjective Expectations 2023 (12-13 June). The conference brings together junior and senior researchers from the field to discuss recent advances in economic research using survey-elicited subjective expectations. The conference and the minicourse are hosted by Bocconi University. Students admitted to the summer school are welcome (in fact, encouraged!) to attend the workshop as well.

LECTURERS OF THE MINICOURSE INCLUDE

- ADELIN DELAVANDE (University of Technology Sydney) on expectations in development (health, education, labor market, agricultural production, migration)
- PAMELA GIUSTINELLI (Bocconi University) on expectations in education and human capital (high income countries)
- CHARLES F. MANSKI (Northwestern University) on econometrics of subjective expectations (identification, measurement, etc.)
- CHRISTOPHER ROTH (University of Cologne) on expectations in macroeconomics/household finance/political economy (behavioral)
- BASIT ZAFAR (University of Michigan) on expectations related to the labor market (field experiments)
